

Roll out

Ridge & Hip System

Roll Out ventilated ridge and hip system, the latest addition to the "High and Dry" range of dry fix from Hambleside Danelaw.

- The single unique universal jointing gasket adds flexibility and allows compatibility with most commonly available ridge and hip tile profiles.
- Broader corrugations than other similar systems at the edge of the Rollout to accommodate more types of ridge design and different pitches of roof.
- Suitable for Hip and Ridge applications. Clips for hip tile cuts provided separately if required.
- When compared to others, the wider butyl adhesive strip provides greater contact area for secure adhesion.
- Roll Out is available in either 6m (ROR6) or 3m (ROR3) packs to suit all requirements, large or small.

Forget the weather...
...fit the Roll Out Ridge & Hip System
